

Conformity to OEKO-TEX® ECO PASSPORT Requirements

TO WHOM IT MAY CONCERN

We, COSMO BD CORPORATION, hereby declare that our products are manufactured in strict compliance with the latest version of the OEKO-TEX® ECO PASSPORT requirements.

As of the most recent update, effective from April 1, 2024, after a three-month transition period, the following new regulations have been incorporated:

Chemicals for Foam Production: The ECO PASSPORT has expanded its scope to include chemicals for foam production, with relevant product categories added under "4.3 Chemicals for foam production"¹.

Masterbatches: Master batches, along with superabsorbent polymers, have been added as a new product category¹.

Self-Assessment Update: The Self-Assessment has been integrated into the ECO PASSPORT application and has been streamlined to include the most relevant questions and topics¹.

These updates are in addition to the existing rigorous standards set by OEKO-TEX®, ensuring that chemicals, colorants, and auxiliaries used in the manufacturing of textiles and leather materials meet strict criteria for a lower environmental impact.

Our commitment to sustainability and environmental responsibility is unwavering, and we ensure that all our products not only meet but also exceed the requirements set forth by OEKO-TEX® ECO PASSPORT.

For further details on our compliance and the specific standards met by our products, please feel free to contact us or refer to the official OEKO-TEX® documentation.

Thank you for your attention to this matter.

Sincerely,

Saiful Islam Jewel
Coordinator
